CLINICAL GRAND ROUNDS

1.5 CME credits available

GOAL
This meeting is designed to enhance provider practice and knowledge of Genomic Medicine. Participants will be kept abreast of topics in the rapidly changing field of clinical genomics through discussion of known and novel genetic/genomic conditions, clinical cases, next generation diagnostic genomic testing, treatment, therapies, and research.

WHAT IS GENOMIC MEDICINE?
Genomic Medicine integrates the understanding of gene interactions and environmental factors as they contribute to human diseases. The Division of Genomic Medicine in the Department of Pediatrics at UC Davis applies this information to improve health care outcomes for both adults and children with genetic/genomic disorders through diagnostic testing, clinical care, education, and research.
