This event celebrates National Women Physicians Day and the International Day of Women and Girls in Science.

Jennifer Grandis, M.D., is a physician-scientist, academic leader, and author. For more than three decades, Dr. Grandis has conducted translational cancer research focused on head and neck cancer, working at the intersection of laboratory discovery and patient care. Her work has advanced precision medicine approaches by identifying critical signaling pathways and genomic alterations and translating those findings into clinically relevant models and therapies.

Alongside her scientific work, Dr. Grandis has spent much of her career building research infrastructure and fostering collaboration between clinicians and investigators. Over time, these leadership roles sharpened her focus on how institutional culture, power, and gender shape who advances—and who does not—in medicine and science.

**Lunch and a complimentary signed copy of *Harsh Medicine: Why Women Can't Get Ahead in Science and Health Care* will be provided for the first 25 in-person attendees.**
