Managing Your Medicines

When you're taking several medicines, it can be hard to keep track of them. But you'll feel better if you take steps to manage your medicines. These tips can help you stay healthy:

- Know the basics about your medicines, such as what they're for and when to take them.
- Take your medicines as recommended.
- Tell your health care providers which medicines (prescription and nonprescription) and dietary supplements (such as vitamins) you use.

Knowing the basics

Ask your health care provider or your pharmacist these questions about your medicines. Write the information on the "My Medicines" chart.

on the triy triedlenies chart.
☐ What are the names of my medicines (brand and generic names)?
☐ What's the strength? (for example, the number of milligrams, abbreviated as mg)
☐ What's this medicine for?
☐ How long will it take this medicine to work?
☐ How much should I take for one dose?
☐ When should I take it? How many times a day? At what times?
☐ Should I take it on an empty stomach?
☐ Should I avoid any foods or medicines when I take it?
☐ Should I avoid alcoholic beverages when I'm taking this medicine?
☐ How does this medicine affect my blood glucose (sugar) level?
☐ Do I need to avoid driving when I take this medicine?
☐ What side effects might happen with this medicine?
☐ What should I do if I experience side effects?
☐ What should I do if I miss a dose?
☐ How should this medicine be stored?

☐ How long will this supply last? What about refills?

Taking your medicines as recommended

When you don't take a medicine as prescribed, the effect on your health can be unpredictable—or even dangerous. If you're not taking your medicine, think about the reasons. Are there unpleasant side effects? Is the medicine too expensive? Is it hard to remember to take it? Tell your health care providers. They may be able to help.

Tips to help you remember to take your medicines

- Try using a pill organizer with a compartment for each day of the week.
- Link your pill-taking to something in your daily routine. For example, take your morning medicine right after you brush your teeth.
- Use a chart to check off when you've taken your medicines.

Telling your health care providers about your medicines

Some combinations of medicine and dietary supplements can be harmful. Each of your health care providers should be aware of all of the medicines you take, including nonprescription medicines (such as aspirin and laxatives) and dietary supplements (vitamins, minerals, herbs, and other substances). Use the "My Medicines" chart to list all of your medicines. Take a copy with you when you see each of your health care providers. You can also give a copy to a friend or a family member.

Contact your health care provider if you are sick to see if your medications need to be adjusted.

My Medicines

Name and strength* of medicine	Used for	How much to take	When to take	Notes**	Date started
Prescription medicines					
Nonprescription medicines and dietary supplements (vitamins, minerals, herbs, and other substances)	supplements (vitamins, r	ninerals, herbs, and	d other substances)		

^{*}Strength means the number of milligrams (mg) or other units. You can find this information on the label.

^{**}Foods or other medicines that should not be taken with this medicine, side effects, and other notes.
