

# Do you have a young child newly diagnosed with ASD?

## GET SERVICES STARTED EARLY

- Younger brains learn information quickly.
- Starting therapies early improves your child's learning.
- Services like speech therapy, occupational therapy, and behavior therapy can increase independence.

Share diagnostic report with your child's pediatrician.

Contact both your Regional Center and your child's school system.

**Regional Centers** are the primary coordinators of early intervention services for children under 3.

**School districts** are the primary coordinators of special education services between ages 3 and 18.

Scan here to find your local regional center.

Contact your insurance provider to determine eligibility for ASD-specific services.
