

Help Waste Find Its Place

Avoid Overfilling Waste Bins

Know Where It Goes!

Waste bins are full when they reach capacity which is identified by the fill line on the container or when 3/4 full.

Waste should not stick out or overflow the top of the bins.

Work with either your Supervisor / EVS / Hospitality / Waste Vendor to adjust waste bin sizes or pick up frequency if overfilling occurs regularly or if items do not fit in the bins. For staff-managed, single-use bins, adjust bin management practices as appropriate.

Identify peak waste generation periods and ensure the waste bin size accommodates these spikes.

Contact EH&S before you implement any process change related to this information
