Tackling RNA viruses: Replication, Antivirals and Vaccines

Dr Cáceres obtained his bachelor in biological sciences and biochemistry degree at the Pontificia Universidad Catolica de Chile in 2013. Subsequently, he obtained his PhD in microbiology at the Universidad de Chile in 2017. The main focus of his PhD research was studying the mechanisms of non-canonical mRNA translation of retroviruses and other RNA viruses. In 2018, he joined the Population Health Department of the University of Georgia as a Postdoctoral Research Associate where he has been working on various aspect of avian, swine and human influenza viruses, including the replication, transmission, development and testing of vaccines and antivirals. More recently, Dr Caceres was also involved in SARS-CoV-2 research evaluating antivirals and host-factors that modulate SARS-CoV-2 pathogenesis.
