Stem Cell and Gene Therapy for Neurodevelopmental Disorders Conference

This inaugural conference, Stem Cell and Gene Therapy for Neurodevelopmental Disorders, is an early discussion of how to develop safe and effective treatments for children suffering from disorders caused by single - gene defects. New advances in this field are actively studied by the expert speakers for this conference, who are all working on cutting-edge research that has the goal of providing future treatments.

The conference is strongly focused on evidence-based science. In bringing these novel cell and gene therapy trials from bench to bedside and into routine clinical practice, many scientists, physicians, healthcare, regulatory, manufacturing and other staff members work together in large teams. Our goal is to enhance collaborative research in the fields of Cell and Gene Therapy for Neurodevelopmental disorders.
