
1. To do epidemiologic studies to see if women who have breast cancer are more likely to have BLV in their breast tissue than women who never had breast cancer.

2. To test samples of human breast cancer to see if BLV is present more frequently than it is in the breast tissue of women who never had breast cancer.

3. To test samples of common bovine food products (dairy and beef) to see if they contain BLV.

4. To test BLV isolated from food products human consume to see if it can infect human cells in culture and change their behavior.
