

## Michelle Anne James, M.D.

<b>Philosophy of Care</b>	I have cared for children with problems with hand and arm function for over 30 years. I focus on the child's function and performance, especially from their own perspective. My greatest professional joy is learning from a child or their parent that my intervention has improved their ability to accomplish a task that is important to them.
<b>Clinical Interests</b>	Dr. Michelle James is a pediatric hand surgeon who cares for children with congenital malformations, neuromuscular conditions including brachial plexus birth palsy and arthrogryposis, and post traumatic hand deformations.
<b>Research/Academic Interests</b>	<p>Dr. James's research interest is children's hand and arm function outcomes, particularly the ability of children with hand problems to perform daily activities and participate in activities of their choice.</p> <p>She has served as Principal Investigator for multiple funded multi-center studies of children's hand and upper extremity function, one funded single-site study of thumb function, and another funded single-site study of burned hand function and outcomes. She has published several prospective and retrospective studies of functional outcomes for children with hand problems.</p>
